

**BOOSTER**

**BON2 55-350**

Delivery  
l/min 140 - 550 / m<sup>3</sup>h 8,4 - 33

Pressure  
BAR 100 - 420 / PSI 1450 - 6000

SUCTION  
BAR 4 - 12 / PSI 58 - 175

Quality System Certified  
ISO 9001

Technical data may be changed by manufacturer at any time

**BON2** INDUSTRY is a product line that includes several products made by NARDI COMPRESSORI specifically designed for different industrial applications. All the machines in this category are built with very robust materials to withstand very intense work cycles offering end-users long-lasting solutions. NARDI High pressure Boosters draw from a pressurized line at a minimum pressure of 4 bar and it recompresses gas up to 350 bar. The compressor block, or pump unit, is the heart of the machine, it is a critical component in which NARDI has put major attention. The features of these High pressure Boosters make them unique in the world.

**Frames** For this product line, 2 types of frames have been developed to satisfy all market demands.

### Frame C

This is the most compact silent model of Nardi Compressori High pressure range. This version is studied for indoor installation, the sound insulated frame with sound absorbing internal lining guarantee a very low sound pressure and the fan blades ensure a good ventilation.

This is a silent model designed to suit also outdoor installations. Our engineers have looked into every single detail to create this anti vibration housing with an easy side-opening ensuring a perfect ventilation to safeguard the pumping block from harsh conditions and lowest noise level.

### Frame M

### Control and Electronics

For proper operation of the Booster, NARDI has designed a new electronic control panel. This new system controls all the main characteristics as temperature, oil level, current consumption, inlet pressure, outlet pressure and it monitors all the sensors, valves and solenoid valves. In addition to this, the electronic control panel keeps track of the service schedule and oversees the status of the filtering system.

### Compressed gas quality

The novelty developed by Nardi Compressori is a system for constant checking that the compressed gas is not contaminated by particles of organic compounds, such as lubricating oil. This is an optional that must be requested upon ordering the Booster.

- 1 Compressor Block
- 2 Intake Valve
- 3 Filter Separator
- 4 First Filter PAC3

- 5 Electronic Control
- 6 Chiller 350 – 500 bar (optional)
- 7 Storage 100 liters (optional)
- 8 Automatic selector By-pass (optional)

Technical data may be changed by manufacturer at any time
